LeetCode: https://leetcode.com/u/Shri_Vikram03/ |

SUMMARY

Computer Science undergraduate skilled in full-stack development, data analysis, and AI-driven applications, using Python, React.js, Node.js, Flask, SQL, and Git across internships and technical projects. Hackathon winner with experience building AI, FinTech, and maritime-technology solutions.

EDUCATION

B.Tech in Computer Science and Engineering (CSE Core) *2024 – 2028 (Expected)*
SRM Institute of Science and Technology, Ramapuram | Chennai, Tamil Nadu, India | CGPA: 9.3

BS in Data Science *2025 – 2029 (Expected)*
Indian Institute of Technology Madras | Remote | CGPA: 7

TECHNICAL SKILLS

Programming Languages: Python, C++, Java, JavaScript, SQL
Frontend: HTML, CSS, React.js, Vite, Tailwind CSS
Backend: Node.js, Express.js, Flask, Django, REST APIs, JWT, bcrypt
Databases: MySQL, PostgreSQL, SQLite
Data & Machine Learning: Pandas, NumPy, Scikit-learn, NLP, Data Analysis
Tools: Git, GitHub, VS Code

EXPERIENCE

Software Development Intern *Jun 2026 – Jul 2026*
Tamil Nadu Startup and Innovation Mission (TANSAM) | Chennai, Tamil Nadu

- Developed an employee Task Management System using React.js and Django, covering task creation, assignment, and progress tracking.
- Built workflow features for status updates and progress monitoring, improving usability for end users.
- Collaborated with the development team on requirements analysis, testing, and debugging to improve application reliability.
- Refined application features based on testing feedback and iterative team reviews.

Plug-and-Play Engineer *Oct 2025 – Dec 2025*
SarlaYash Learning Solutions LLP | Remote

- Performed data analysis on real-world structured datasets to identify trends and generate actionable insights.
- Cleaned and transformed datasets for analysis and reporting, applying analytical techniques to support data-driven decisions.
- Collaborated with team members to translate analytical findings into recommendations.

PROJECTS

AI-Based Oil Spillage Detection and Vessel Attribution
Python, Machine Learning, Computer Vision, Satellite Imagery, AIS Data

- Developed an AI-driven system to detect potential oil spills from satellite imagery, distinguishing oil signatures from natural look-alikes.
- Integrated AIS vessel data with an anomaly-analysis workflow (trajectories, proximity, dark periods) to support suspect-vessel identification.
- Incorporated environmental and oceanographic factors for spill-movement analysis and designed a dashboard concept for visualizing spill location, intensity, and vessel attribution.

YieldSense — DeFi Liquidity Risk Dashboard
React.js, Solana, Machine Learning, FinBERT, Wallet Integration

- Built a dashboard analyzing liquidity pools, APY, impermanent loss, and risk indicators for DeFi users.
- Integrated FinBERT-based sentiment analysis and a machine-learning safety scoring model into liquidity-pool risk assessment.
- Incorporated Solana blockchain data and wallet connectivity to enable interactive, real-time DeFi analytics.

ACHIEVEMENTS

- Winner / 1st Place — AI International Conclave Hackathon, for an AI-based marine engineering solution improving vessel operations.
- Finalist — Smart India Hackathon (SIH) 2026 Internal Hackathon, for an AI-driven solution to a real-world maritime engineering problem.
- 2nd Place — DEFY'26 Hackathon, VIT (FinTech Domain), for developing a FinTech application solution.

CERTIFICATIONS

- Database Management Systems (DBMS) — NPTEL | Silver Elite
- The Joy of Computing Using Python — NPTEL | Silver Elite
- Developing Front-End Apps with React — IBM / Coursera
